Introduction:

We envision a world where every child has the opportunity to live life to its fullest. Good nutrition is a fundamental basis for health and development, yet malnutrition remains the most serious health problem in the world and the largest contributor to child mortality, so Sanid Organization for Relief and Development (SORD) has made treating malnutrition a top priority.

Our goal in the nutrition sector in SORD is to ensure that mothers and children receive good nutrition and end malnutrition in the target area.

Project Summary:

Given the current coverage of the Targeted Supplementary Feeding Program (TSFP) and the coverage of the Basic Nutrition Services Package (BNSP), Sanid Organization for Relief and Development (SORD) - in cooperation with the Ministry of Public Health and Population (MoPHP) is planning to reach 781 children under the age of five and 339 pregnant and lactating women through the TSFP program. The detection of active cases was emphasized by measuring MUACs through the community awareness component. Priority activities were (a) Strengthening the provision of CMAM - MAM services in order to increase service access to the target area with a high malnutrition rate; (B) Promote community services through trained community nutrition workers and volunteers. Thus BNSP ensures the provision of a minimum preventive service that includes health education, promotion of IYCF infant and young child feeding, micronutrient supplementation, and deworming to ensure that the nutrition is eaten holistically rather than in a purely therapeutic perspective. Women who are illiterate or who suffer from lack of education and women married at an early age are more vulnerable to under nutrition. Therefore, women and mothers of childbearing age have been targeted in the proposed courses to increase community awareness of a total of 242 women. In order to ensure the progress of the project, continuous evaluation, supervision visits and monitoring of program performance indicators were carried out

regularly, and for the sake of transparency and to ensure the achievement of the project and to ensure the satisfaction of the beneficiaries, the complaints mechanism was activated.

The nutrition program at the Ablas unit focuses on:

- Children suffering from severe acute malnutrition can access therapeutic feeding for patients in the health unit with fully trained staff to reduce the prevalence of acute malnutrition among children under five and pregnant and lactating women.
- Children and pregnant and lactating women with acute and moderate malnutrition have access to a targeted supplementary feeding program and appropriate infant and young child feeding sessions.
- Health workers and community volunteers are trained to screen for acute malnutrition, effectively detect cases, and follow up on the beneficiaries of the program.
- Strengthening preventive nutrition services among vulnerable population groups.

The main nutritional intervention to SORD:

- Provision of medicines and nutritional supplements.
- Providing preventive services.
- Conducting educational sessions on infant and young child feeding, health and hygiene for caregivers of children suffering from malnutrition.

Implementation:

Implementation of the nutritional program activities at the health unit and community level:

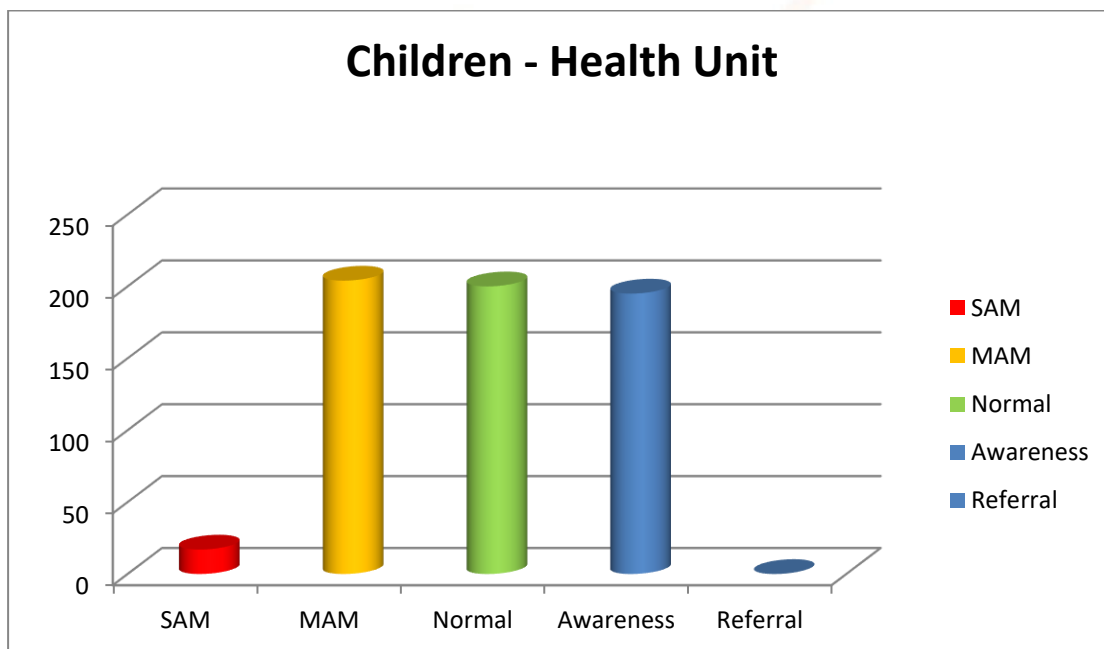

Responsible HWs and CHVs have provided all CMAM services to children 6-59 months old with SAM in the health unit and at community and family level, such as nutrition screening, admission to TSFP and OTP, vitamin A supplementation, Fe / Fo supplementation for pregnant and lactating women, Deworming and zinc supplementation for diarrhea cases, hygiene promotion and other key primary health services.

In schedule No. () statistics for the number of children > 6 to 59 months at the health center level:

to to 59 months according 6 < children Monthly summary of the number of the schedule at the level of the health center					
Number of children	nutritional status Classification by criteria in the of the child by all the screening record			Action taken	
	Sever acute malnutrition (SAM)	Average malnutrition MAM	Normal	Awareness	Referral
421	17	204	200	195	0

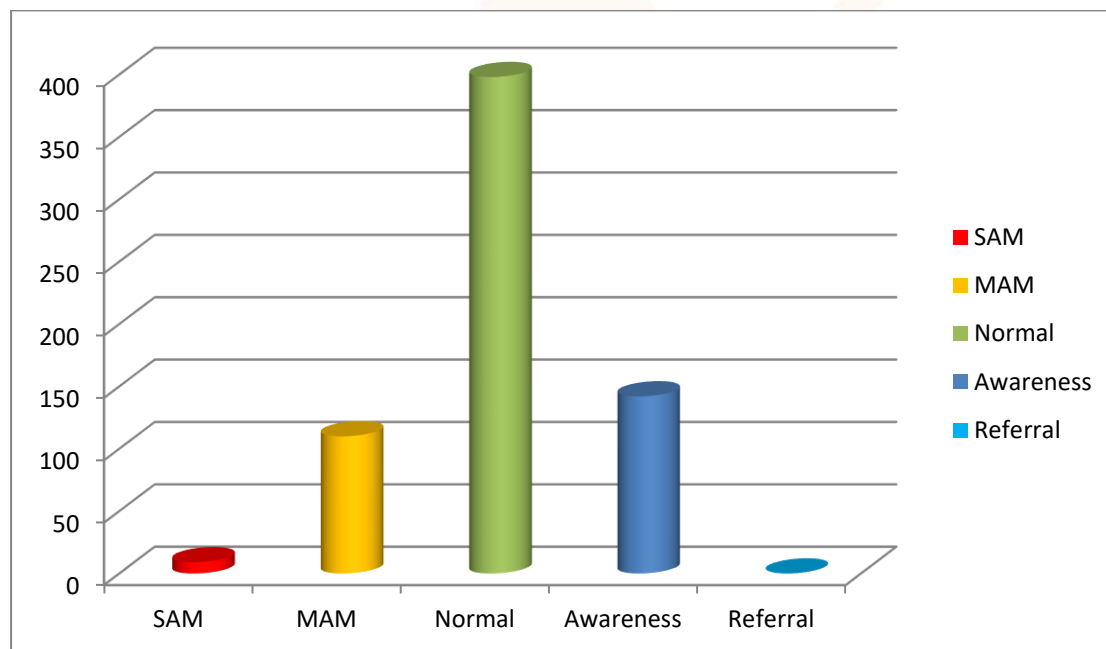

Diagram No. () for the statistics of children > 6 to 59 months at the health center level:

schedule (No.) Statistics of the number of children > 6 to 59 months at the community level (volunteers)

Monthly summary of the number of children > 6 to 59 months according to (the schedule at the level of the community level (volunteers)

Achievements :

The achievements of the treatment and preventive program SAM and MAM in the health unit in the area of Laplace from May until November 2020, as shown in Table (No.).

Table No. () Achievements of Activities:

Activities	Number
#Acceptance of SAM	26
# Acceptance of MAM	314
The number of pregnant and lactating women has reached to the awareness session on infant and young child feeding	168
Number of pregnant and lactating women received iron and folic acid tablets	122
# Children 6 to 59 months old who are screened and referred for acute malnutrition	17
Children 6 to 59 months old who are screened and referred for acute malnutrition # at the community level	7
Number of children 6-24 months of age tested and referred for acute malnutrition	26
# Children 6 to 24 months of age who were tested and referred for acute malnutrition at the community level	5
Plumpy Nut carton number has been distributed	48
#Pregnant and lactating women	258
# An advisory session	
The number of worms tablets distributed	35
(Micronutrients(Powder	76
